

## Build a Medium Pond With a Waterfall

A water pond can be the perfect complement to your garden. Learn how you can build your own beautiful pond—complete with a glistening waterfall—that's suitable for fish.

- Step 1: To shape and visualize the pond size, use a measuring rope to help you determine an accurate pond basin size. This will be your excavating guide.
- Step 2: Use a shovel to dig the inner outline in the shape that you measured with rope.
- Step 3: Use a tape measure to determine the bottom depth in multiple locations to ensure your pond is accurate. Check levelness with a level and 2" x 4" board.
- Step 4: Place pond guard and liner in the newly formed basin. Keep an even overlap on all sides of your water garden.
- Step 5: Connect the pump, PVC tubing and filtration components together. Place the components into the necessary locations for function.
- Step 6: Fill the basin with water and liner will naturally form to the pond shape you have created.
- Step 7: Personalize your pond with landscaping elements, water accents, water plants lighting and more!

### What you'll need:

- Rope
- Shovel
- Tape measure
- Level and 2" x 4" board
- Pond guard and liner
- Pump
- PVC tubing and liner
- Filter
- Connector clamp
- Diverter valve
- Telescope riser
- Submersible LED lights
