

SteelLinx Metal Roofing

Metal roofing isn't just for barns anymore.

From tool sheds to residential homes to industrial warehouses, metal is becoming the material of choice for many roofing and siding applications. Metal roofs are favored for their fire-resistant qualities, longevity, and speed of installation – in most cases, by a qualified metal-roofing contractor. They are also surprisingly lightweight and are great at reflecting heat from the sun.

Terminology

- ▶ **Profile Roofing:** Provides versatility with an updated look. This can be used on a roof, cabin, or barn, and is durable enough to meet the needs of any location.
- ▶ **Loc Seam:** Long-lasting roofing alternative that is a low-maintenance steel panel, providing strength and durability.
- ▶ **R-Panel:** Designed to withstand high winds, this panel is versatile in application. R-Panel is not only a strong roofing alternative, but can be used as a general utility panel in industrial, residential, agricultural, and light commercial applications.
- ▶ **Corrugated:** Galvanized coating protects from wear and tear from heavy machinery and livestock damage.
- ▶ **5-V:** Galvanized coating is great for climates affected by moisture and heat. Resists rust and corrosion.

SteelLinx Metal Roofing Profiles

Clean and contemporary

Metal roofing materials are made primarily from aluminum and steel, but other materials, such as copper and alloys, are also used. Some sheet-style materials such as “standing-seam roofing” have a decidedly commercial look that is favored by architects for their clean, contemporary appearance.

PS-9

- ▶ Available in 29 and 26 gauge
- ▶ Exposed fastener system
- ▶ 36" panel coverage, 3/4" rib height
- ▶ Trapezoidal rib on 9" center
- ▶ Minimum roof slope 3:12
