

# Flying Gecko

## *Ptychozoon kuhli*

**Distribution:** Malayan Peninsula to Indonesia

**Size:** 6" - 8"

**Natural habitat:** This arboreal gecko is from the Malayan Peninsula and is native to the tropical rain forest. It is a tree dweller. When captive, adults require a 15 gallon enclosure.

**Behavior:** Males can become territorial, separate from other males. Hyperactive and hard to hold. Provide dense foliage. This species is nocturnal (active primarily at night).

**Captive environment:** Use full spectrum lighting 12-14 hours per day. Provide a basking area with access to a cooler zone. Provide several climbing areas on branches, logs, & plants.

**Temperature:** Day temperature should be gradient from 78-86 degrees F. Maintain night temperature range between 72-80 degrees F. Use reptile heating pads under tank for 24-hour heat.

**Humidity:** This species requires moderate to high levels of humidity.

**Water requirements:** Mist the enclosure daily for moisture and high humidity. Provide a large shallow bowl for drinking and soaking. Enclosure must be well ventilated.

**Nutritional requirements:** This carnivore eats insects and arthropods. Always offer variety for proper nutrition. Eats variety of larger worms (earthworms, meal/wax worms). Dust food with calcium and vitamins.
